## By the end of this video you will be able to...

- Explain the selection sort algorithm
- Write code to perform selection sort

**Move 51 to its correct position**

**Move 51 to its correct position**

**Move 51 to its correct position**

**Smallest?**

**Smallest?**

**Move 66 to its correct position**

**Last item must be in correct position!**

- Find smallest element, swap it with element in location 0
- Find next smallest element swap it with element in location 1
- etc.

## Selection Sort

## Selection Sort: Basic Algorithm

For each **position  $i$**  from 0 to  **$\text{length}-2$**

# Selection Sort: Basic Algorithm

For each **position  $i$**  from 0 to  **$\text{length}-2$**

Find smallest element in "still unsorted"

Swap it to **position  $i$**

## Selection Sort: Basic Algorithm

For each **position  $i$**  from 0 to  **$\text{length}-2$**

Find smallest element in **positions  $i$  to  $\text{length}-1$**   
Swap it with element in **position  $i$**

# Selection Sort: Basic Algorithm

For each **position  $i$**  from 0 to  **$\text{length}-2$**

Find smallest element in **positions  $i$  to  $\text{length}-1$**   
Swap it with element in **position  $i$**

```
public static void selectionSort( int[] vals )    {
```

```
}
```

```
public static void selectionSort( int[] vals )    {

    int minI;

    for ( int i=0; i < vals.length-1 ; i++ ) {

        }

    }

}
```

```
public static void selectionSort( int[] vals )    {

    int minI;

    for ( int i=0; i < vals.length-1 ; i++ ) {
        minI = i ;

        for ( int j=0; j < vals.length; j++ ) {
            if ( vals[j] < vals[minI] ) {
                minI = j ;
            }
        }

    }

}
```

```
public static void selectionSort( int[] vals )    {

    int minI;

    for ( int i=0; i < vals.length-1 ; i++ ) {
        minI = i ;

        for ( int j=0; j < vals.length; j++ ) {
            if ( vals[j] < vals[minI] ) {
                minI = j ;
            }
        }

        if ( minI != i ) {
            swap ( minI , i );
        }
    }
}
```

# Thought questions

- How do we know this algorithm works?
- Are there other approaches?
- Can we do better?

# Correctness

# Correctness

# Performance

## Selection Sort: Basic Algorithm

For each **position  $i$**  from 0 to  **$\text{length}-2$**

Find smallest element in **positions  $i$  to  $\text{length}-1$**

Swap it with element in **position  $i$**
